

## Section: Pengenalan QGIS

### Answers to section modules.

**Module Name** QGIS Overview

**Question:** -

---

**Module Name** QGIS User Interface Tour

**Question:** QGIS Desktop requires access to a license server once installed

[Answer:](#) *False*

**Question:** QGIS Desktop user interface customizations are

[Answer:](#) *Stored automatically within the current user profile settings*

---

**Module Name** Adding vector data

**Question:** Which of the following file extensions would you choose to add a shapefile into QGIS

[Answer:](#) *shp*

**Question:** Can QGIS open KML files generated in Google Earth

[Answer:](#) *Yes, QGIS opens KML files natively*

---

**Module Name** Adding raster data

**Question:** Which statement best describes an image taken with a phone camera

[Answer:](#) *Raster data that may be geotagged with location and bearing*

**Question:** What is one distinct advantage of adding raster layers using the browser panel

[Answer:](#) *It automatically filters the available files to show only items with a suitable extension for loading into QGIS*

**Question:** Can raster layers be stored in a database

[Answer:](#) *Yes, this will enhance analysis as vector and raster operations can be easily combined*

---

**Module Name** Navigasi data peta

**Question:** Anda tambahkan beberapa layer ke QGIS tapi Anda tidak dapat melihat semuanya. Kenapa

**Answer:** *Tampilan cakupan Anda tidak sesuai dengan cakupan layer*

**Answer:** *Urutan iayer Anda teiah menghasiikan beberapa iayer yang menutupi iayer iainnya*

**Question:** Jika Anda memperbesar tampilan data Natural Earth, lalu data tidak terlihat bagus dan tidak benar. Kenapa?

**Answer:** *Datanya disederhanakan*

**Question:** Saya klik pada peta dengan tool identifikasi tapi tidak ada atribut atau atribut yang salah muncul. Kenapa

**Answer:** *Layer yang ingin saya teiusuri tidak aktif*

---

## Module Name **Sourcing Spatial Data**

**Question:** Which of the following statement is true ?

**Answer:** *Any user can contribute their data to Openstreet map.*

**Question:** Which statement is true regarding open source data

**Answer:** *There are no cost associated with downloading the data.*

**Question:** When using Open source data users should abide by the licensing rules.

**Answer:** *True*

---

## Module Name **Working with CSV**

**Question:** Is it possible to load a CSV that does not contain geometry information to QGIS i.e no longitude or latitude columns

**Answer:** *Yes*

**Question:** What is the easiest way to load an excel spreadsheet with geographic information to QGIS.

**Answer:** *Save the spreadsheet as a CSV and them load it into QGIS*

---

## Module Name **Working with Spreadsheets**

**Question:** Is it possible to save attribute tables into a spreadsheet from QGIS

**Answer:** *It is possible within QGIS*

**Question:** What does latitude/longitude represent in the real world

**Answer:** *These are the geographic co ordinates of any particular place on the earth surface*

---

**Module Name** Dasar data atribut

**Question:** Ketika Anda membuka tabel atribut layer di QGIS, dimanakah kolom geometri

**Answer:** Kolom geometri ditampilkan pada peta

---

**Module Name** Adding and removing columns

**Question:** After removing a column and saving your edits, you can press undo to get it back again

**Answer:** False

**Question:** Indicate which statements are correct

**Question:** Is it possible to organize the order for the columns you have created

**Answer:** Yes, there is a native tool in attribute table that controls ordering columns

**Question:** In the attribute table you can create columns using the New Field tool or Field calculator. What are the key differences between the two methods

**Answer:** Field calculator is used when you need to create a non empty column.

---

**Module Name** Query and Filter Attributes

**Question:** True or false: Applying a filter in the attribute table will result in only those features being shown on the canvas

**Question:** What is the purpose of filtering the attribute table - choose all that apply

**Question:** Why would you choose filter using form rather than the normal filtering

**Answer:** Form based filter allows you to combine multiple filters on a combination of columns

---
